

Snake

1. Choose what game you are going to play; multiplication or addition.
2. You start under the column S. Roll the dice.
3. Students will add or multiply the two numbers. They write the sum or product under the S column.
4. Continue to roll the dice. Students continue to write the sum/product for each roll under the S column.
5. After each roll of the dice students may decide to go out of the game. After I roll and give them a short amount to compute and write, I count to five. Students have five seconds to decide if they want to go out of the game. They must completely sit on the ground.
6. The round ends whenever you roll a single 1 on the die.
7. Any student who is sitting out, when you roll a 1, may keep their points for that round. Any student still in the game has to cross out all their points for that round.
8. If you happen to roll SNAKE EYES (two 1's), any students still in the game loses points from ALL the rounds!
9. All students come back into the game for the next round. For the second round you start in the N column, third round A column, each round a new column. You continue to play this way for each round.
10. At the end of the game students will count up all the points they have collected from all the rounds they earned points. The student with the highest point total wins!

*Note- sometimes you might roll a 1 for the first roll of the round. I always re-roll so at least we have something to go by for that round.
